

Temperature Compensation Probe TC-probe

Description

The Temperature Compensation Probe TC-probe is used to compensate strain measurements for thermal influences. The sensor is compact in order to measure the temperature very locally and in close vicinity of the strain sensor(s). The sensor has a stainless steel housing and has a connector on one end.

Features

- Compact temperature sensor for temperature compensation of strain measurements
- High accuracy and excellent long-term stability
- Wide temperature operating range
- Single ended configuration

Applications

Compensation of thermally induced effects during strain measurements. Its use is primarily intended for temperature compensation of the fibre optic Strain Gages SG-01 and the Strain Gage Chains SGC-01.

Standard specifications

Parameter	Value
Temperature resolution ¹	0.1 °C
Temperature precision ¹	0.2 °C
Temperature range ^{2,3}	-20 °C to +110 °C
Sensor length	58 mm
Housing diameter	5 mm
Housing material	SS316
Pigtail diameter	0.9 mm
Pigtail length ³	1 m
Pigtail material	PVDF
Connector type	FC/APC

¹ Taking into account a depolarized measurement device with a 1 pm wavelength resolution and precision.

² For the sensor and not for the connector. For the extreme temperatures, splicing is recommended.

³ Extendable on request.
